## RFID Global Solution Deploys Real-Time Asset Location Tracking for Boeing at Kennedy Space Center

April 2008, Mount Airy, MD: RFID Global Solution, Inc (RFIDGS) is currently implementing an RFID-enabled asset tracking system for The Boeing Company at the Kennedy Space Center in Florida. The system, designed by RFIDGS, uses advanced active RFID technology to locate equipment and tools within several facilities and mobile vehicles.

The solution uses the real-time location tracking module within the **GlobalView™** software suite to monitor the whereabouts of both critical assets and components across pre-defined areas of the space center. The system also supports vehicle-mounted visibility solution with mobile terminals, powered by **GlobalTrac™**, used in support of the delivery of payloads to the launch site.

"This effort with Boeing at the Kennedy Space Center extends RFID Global Solution's deployment of automatic data capture technology across all aspects of the aerospace marketplace," said Dave Eagleson, RFID Global Solution's Senior VP of Sales and Marketing.

### About RFID Global Solution

RFID Global Solution, Inc. is an industry leader, providing complete system solutions that utilize both active and passive RFID, as well as GPS, cellular and camera based technologies for use by both government and commercial customers. The company develops end to end wireless asset and personnel management solutions that provide real-time visibility at both the site and enterprise levels. The company's innovative products include the patented RFID **SmartTable™**, **SmartCart™**, and patent pending **SmartFreezer™** Insert, to name but a few of the solutions powered by RFIDGS. With over 160 years of RFID system design, development and deployment expertise, RFIDGS's team members have deployed hundreds of projects involving some of the world's largest government and commercial based companies.
